## 3 Introduction

The EHR-Q<sup>TN</sup> project intended to "better prepare the health community across Europe for systematic and comparable quality assurance and certification of e-Health products, more specifically of Electronic Healthcare Record systems."

The Description of Work listed a number of activities and outcomes in order to favour that quality labelling and certification of Electronic Healthcare Record systems, more precisely under (2) "produce for each of the countries involved a database of all the stakeholders with an interest in high quality EHR systems (suppliers/vendors, authorities, user organisations and academics)".

One of the conclusions of the EHR-Implement project highlights the importance of involving all the stakeholders in order to maximise success when implementing at a large scale EHR Systems. "Stakeholder engagement is vital throughout the EHR selection, decision and implementation processes. Stakeholder involvement ensures system ownership and motivation towards supporting and using EHR." (Laurence Esterle - Large scale EHR implementation : the other side of the story at Medinfo 2010, Cape Town, South Africa).

The same reasoning applies when authorities want to influence, to improve the quality and the functionality of those applications in order to provide the expected added value to the society and her citizens.

For each of the countries involved in the project such an "overview" database was produced and submitted as a D3.1B Deliverable. The Deliverables D3.1 part I and part II are providing a cross-border overview of the different markets for the different domains of application of using EHR systems.

This deliverable (together with Part II) is one of the first and essential steps to reach those goals and to promote EHR Quality Labelling and subsequent certification: identifying the stakeholders involved.

The main stakeholders are the health authorities representing indirectly the patients, the procurers and payers of the applications, the users being the healthcare professionals and the suppliers of health information systems.

Part I of the Deliverable lists the suppliers of Electronic Healthcare Record systems per domain of application or intended user group: suppliers of systems for general practitioners and ambulatory medical specialists, suppliers of hospital information systems, suppliers of systems for nursing and home care, suppliers of systems for paramedical professionals (physiotherapists, logopedist, etc..) and suppliers of systems for dental care professionals.

Part I is completed with a list of various Health IT Service providers, e.g. of telematic services and the organisations / federations of suppliers and users, if existing.

We are also investigating in Part I of the Deliverable cross border use of some applications as well as international ownership of the different applications on the market.

Part II of the Deliverable lists the other (important and sometimes essential) stakeholders, specifying their actual and/or potential role in enforcing and supporting quality assessment and certification of Health IT products. They represent the healthcare professions, the health insurance sector as well as the public health authorities and specialised research organisations or institutes.

## 4 Disclaimer

The purpose of the deliverable was not to be exhaustive *at any price*. The resources of this project are too limited for that. The partners intended to cover / to list at least the most important providers, covering all together over 90% of each the national markets.

Some suppliers may not be listed. This is not due to any deliberate choice or selection made by the authors or the authorities. This is mostly due to the difficulty to get the data, even to get non validated data.

Only countries with a kind of quality labelling and/or a public tender approach when selecting EHR systems or countries with a very limited number of suppliers active on their market are able to provide, sometimes only for one specific user group or profession, data about the EHR Systems on the market and figures about their (approximated) market share.

The lists of suppliers and applications may – even in countries with a kind of quality labelling – not reflect real use of "clinical" EHR systems, certification frequently being focused on activity reporting and billing, as e.g. in Germany.

Identifying the suppliers was not possible for some user groups or professions in some of the countries either because no systems are in use (a customised excel sheet excepted...) or because it was impossible – within the timeframe of the project and with the resources available - to obtain that information.

Market information was only provided for the two main markets (GP Information Systems and Hospital Information Systems) by all the countries represented into the project.

Up to five countries provide information on those two main EHR markets only: Bulgaria, Germany, Poland, Portugal and Serbia. There local market for home care / home nursing, paramedical software (e.g. for physiotherapists) and dental EHR systems might be very limited, though this will surely not be the case for Germany. Limited resources and unavailability of that information are the main reasons for this status of the review.

Market penetration and market shares are even more difficult to get. Validated information about those market shares do not exist in most of the countries or are not made available, e.g. by the authorities.

The exceptions are the countries with "public" procurement of those health information systems (England), countries with a mandatory certification of mainly administrative and billing centred applications (Germany) or the countries where public incentives are granted for the use of certified applications (Belgium).

Information about market shares is nicely provided for Denmark, at least for the primary care or GP information systems. Other countries listed the main or top three suppliers or products and the applications with estimated over 5% market share.

That information about the market shares is part of the individual EHR Market Overviews, submitted as D3.1B deliverables.

## 5 EHR Market Overview Template

An EHR Market Overview Template was provided to the members of the EHR-Q<sup>TN</sup> project. This improved consistency between the different collections. The template is still available on the EuroRec web site.

<http://ehr-q-tn.eurorec.org/files/templates/National%20Market%20Overview%20v08.doc>

The template listed the stakeholders per category:

1. Healthcare Authorities, mainly the regulators and stakeholders responsible for overall strategy and funding.
2. Healthcare Insurance Organisations with different roles depending on the type of dominant healthcare organisational model, private or public.
3. Public Health Organisations as users of health related (epidemiological) data.
4. Scientific and/or Research Organisations as well as Academic Institutes, as experts and advisors for authorities and public organisations, most involved in IT and Technical issues.
5. Healthcare Institutes, an important stakeholder as users and procurers of Health IT applications.
6. Healthcare Professional Organisations, representing the large user group and important stakeholders defining and validating mainly the content related aspects of the applications.

7. Health IT Industry and Service Providers, providing the applications and services, considering the strategic options taken by the authorities, the expectations of the professional users and up-to-date technological tools and solutions.

A web application was developed in parallel, enabling the partners to enter the directly in a specific template. Each partner is routed directly to his National Overview when logging in.

The application is available for the members of the consortium at the following address:  
[http://www.eurorec.org/consortium\\_intern/EHR-Q/survey/index.cfm](http://www.eurorec.org/consortium_intern/EHR-Q/survey/index.cfm)

Each partner is routed directly to his National Overview when logging in.

The use of the web application was not mandatory. Some partners preferred to enter data directly into the Word Template.

Only the coordinator has access to the different data entry forms for the different countries.

**Your National EHR Market Overview: Belgium**

**Introduction**

It is important to produce an overview (who is who) of the stakeholders involved or potentially interested in certification and quality assurance of Electronic Healthcare Record systems.

This inventory should be considered as a first step towards implementing or maintaining that certification and quality assurance in each of the countries studied within this Thematic Network project.

This inventory should be as exhaustive as possible, more specifically when listing the Health IT Industry and Service Providers, enabling a local organisation, e.g. the local EuroRec partner or any other assigned party, to bring together most of the important / decisive stakeholders.

Criteria to include someone, an organisation, an institute or an authority are the following ones:

- Do they actually have an active role in quality assurance of EHR systems?
- Did they manifest a particular knowledge of the domain (certification / quality labelling) in the past?
- Is their cooperation or at least approval essential in order to introduce successfully certification and quality labelling of EHR systems?
- Are they a representative or important party in the particular EHR market, addressing a specified group of users?
- Is there a risk of obstruction not including them in the process of certification and quality labelling?
- Are they a representative or important party of their class of products addressing a specified group of users?

**Confidentiality and Use of the Inventory**

The inventory should contain as much as possible publicly available information.

The use of the inventory will be restricted.

Each country / each partner in the consortium can decide to make the inventory describing the EHR Market in his country free and publicly available or not.

The compiled European Overview will only be accessible to the partners of the consortium and to the Commission who is funding the project.

**Generate report:**

Austria

**Dear partner,**

The Market Overview can be completed step by step by selecting one by one the stakeholders listed on the left. Completing the form can also be shared with your colleagues. All colleagues of a beneficiary can add data of a stakeholder. Data about a stakeholder is saved by clicking on the button "Add stakeholder".

If you have any questions about this on-line survey, please contact [Geert Thienpont](#).

Thank you in anticipation,  
The EuroRec team.

[BACK](#)

### Add new/update Health Authority

List of the Healthcare Authorities that have competence / authority regarding the way healthcare can / should be provided to the inhabitants of the country and directly or indirectly also regarding the applications or instruments used to provide that care.

Provide for each of the enumerated authority at least address, contact information and main role regarding healthcare in general and especially regarding both the use and certification of EHR systems.

If different departments address specific aspects of the EHR, the EHR systems and their use, then list each of them separately. Telematics are – for the purpose of this deliverable - considered as a way of using EHR systems.

List also the different **regional authorities** in case of regional competences regarding the provision of healthcare, the EHR, the EHR systems and aspects related to the way they are used.

Consider to provide a separate overview per region in case of important differences between the regions.

Name of Health Authority*:	<input type="text"/>
Short name:	<input type="text"/>
Address:	<input type="text"/>
ZIP:	<input type="text"/>
City:	<input type="text"/>

## 6 National Overviews

The consortium provided 24 “National” Overviews, all of them structured the same way and comparable.

The overview for the United Kingdom was limited to England, access to information from other regions in the United Kingdom not being that evident, also considering the regional competences on Healthcare.

The next table lists the different National Market Overviews and the date they were submitted to the Project Officer.

Date	
Austria	13.10.2010
Belgium	30.04.2010
Bulgaria	25.05.2010

## 7 Main conclusions from the Market Overviews

We listed in total 1.042 IDs and addresses of products and/or services with their supplier:

- 849 commercial EHR systems for GP's, Hospitals, Home Care and Home Nursing, paramedical mainly physiotherapy systems as well as dental systems, with the focus on the GP information systems and the Hospital EHR systems.
- 27 in-house developed hospital information systems
- 122 "technical" services, e.g. telematic services, privacy enhancing services etc... and their service providers
- 44 addresses are from eHealth / Health IT organisations regrouping several / the national industrial partners involved.

## 7.1 Total figures

	GP	Hospital	Home / Nursing	Para-medical	Dental
<b>Suppliers</b>	240	262	87	73	60
<b>Applications</b>	290	320	91	87	61

<b>Average Internat. Applic.</b>	1,18	4,25	0,47	0,79	0,60

**Table 2 Totals for the different overviewed EHR markets**

### *Countries reporting*

All the countries present in the consortium reported on the IT systems used in private practices, two of them (Poland and Cyprus) did not report any application to be used in primary care. This seems in reality to be the case for Cyprus while primary care in Poland is reported to be organised around health care centre, using out-clinic health centres oriented applications.

### *Number of suppliers and applications in the different markets*

The GP market and the Hospital Market are the two main markets studied. They have fairly an equal number and an equal average number of suppliers and applications.

Both markets have – for the reported countries – in average 13 different applications on the market. The distribution over the different countries is showed in table 4.

There are of course also differences between those markets:

- Hospital Information Systems are more complex and will generate a multiple of the income from the GP Information systems.
- Not all of the 320 “hospital information systems” are complete systems nor comprehensive EHR systems. Some, a minority of the products listed as hospital information systems are departmental systems (for a specific environment as e.g. intensive care) or related to technical departments (mainly imaging and lab systems) commercialised as separate products or applications.
- Extending the meaning of the term “hospital information systems” to all the departmental systems possibly linked to a central system should result in an important increase of the number of applications, not necessarily EHR systems.

The other markets are less complete, considering the reduced number of countries reporting such systems. The report seems nevertheless representative, illustrating similarities and differences with the main markets.

The number of suppliers and applications per reported country are less important (half so much as for the GP systems) indicating either a less mature market or a market organised differently: a smaller number of procurers, buyers of these applications.

#### *Average number of applications per supplier*

The number of applications per supplier are 1,21 for the GP systems and 1,22 for the hospital information systems, even less for the other markets.

The rule is still one application per supplier.

The main exception is the CompuGroup for the GP Information systems and some international suppliers for the hospital markets as we have iSoft, Siemens, McKesson or Afga Gevaert.

#### *Cross border and International Applications*

The same applications used in more than one country are rather exceptional. They are called in "Cross Border" systems.

This is the case for some applications used in smaller and neighbouring countries (Luxemburg, Slovakia...) for GP Information Systems and some Dental Systems.

This is also the case for some departmental systems used in several countries (they have the same name, but are they completely similar?) or some US systems.

Some suppliers are providing different systems in different countries, controlling the local entity producing and/or selling and/or maintaining a local product. These local products were mostly developed before the take over of the company.

The Koblenz, Germany based CompuGroup AG is the most prominent supplier of different EHR systems in different European countries, mainly for primary care but not exclusively.

Another "international" player is CEGEDIM from France, less represented in this overview as we don't have France anymore as a partner in this project.

A large number of stakeholders involved in hospital information systems are also "international suppliers", supporting either the same or similar departmental systems in different countries or even implementing local variants of some of their main applications.

Some of these international suppliers are also assisting in-house developments in some large hospitals.

## 7.2 European Overview of the Suppliers

	Suppliers					
	GP	Hospital	Home / Nursing	Para-medical	Dental	Total
Austria	40	20	0	1	7	68
Belgium	17	8	25	19	4	73
Bulgaria	6	3	0	0	0	9
Croatia	7	1	0	0	6	14
Cyprus	0	3	1	0	1	5
Czech Republic	4	8	3	1	1	17
Denmark	17	8	4	16	12	57
Estonia	3	5	1	1	0	10
Germany	43	10	0	0	0	53
Greece	17	25	4	1	7	54
Hungary	3	6	3	0	3	15
Ireland	5	8	1	3	0	17
Italy	10	38	5	0	1	54
Luxembourg	6	5	2	2	0	15
Netherlands	6	21	12	5	0	44
Norway	3	7	3	5	1	19
Poland	0	7	0	0	0	7
Portugal	12	11	0	0	0	23
Romania	9	6	1	0	3	19
Serbia	3	3	0	0	0	6
Slovakia	11	14	2	2	4	33
Slovenia	5	5	1	1	1	12
Spain	8	24	10	6	4	52
United Kingdom	5	16	9	10	5	45
<b>Total</b>	<b>240</b>	<b>262</b>	<b>87</b>	<b>73</b>	<b>60</b>	<b>722</b>

**Table 3 Total number of suppliers per country per domain of application**

All the suppliers are accounted once per country where they are active, each time with a national address or contact point.

We accounted 722 supplier instances in the different countries, in average 30 suppliers per reported country.

Belgium has the largest number of reported suppliers. This is mainly due to the large number of home care / nursing system suppliers and the large number physiotherapy system suppliers identified, those systems being officially quality labelled in Belgium.

Some other countries as Denmark, Greece, Spain and the United Kingdom are well represented, with suppliers reported for each of the domains of application.

There seems to be a relation between the way primary care is organised and the number of suppliers operating in that market. Some large countries (Italy, Spain, United Kingdom and The Netherlands) with a high degree of use of EHR systems in primary care reported only a small number of suppliers.

Other countries, with a more competitive “free” provision of primary care reported a large number of suppliers and even more different applications in primary care. Examples are Austria, Belgium and Germany, though consolidation is going on in these countries too.

The table illustrates also that some countries did not report any supplier for a given domain of application:

- Cyprus and Poland did not report primary care or GP information system suppliers. The reasons were yet explained.
- No country didn't list at least one supplier of hospital information systems
- Austria, Bulgaria, Croatia, Germany, Poland, Portugal and Serbia didn't report any supplier of applications for the nursing home care applications. This indicates mainly a limited market, at least a limited commercial market.
- Bulgaria, Croatia, Cyprus, Germany, Hungary, Italy, Poland, Portugal and Serbia didn't report any supplier of applications for paramedical and mainly physiotherapy use. Most applications reported seem to be distributed by “small scale” suppliers.
- Bulgaria, Estonia, German, Ireland, Luxembourg, The Netherlands, Poland, Portugal and Serbia didn't report any existing Dental Information System being in use in their country. This might be, at least for some of them a lack of knowledge of that market.

### **7.3 European Overview of the Applications**

Most of issues addressed in the previous section regarding the suppliers also apply for the applications, e.g. regarding the not reported domains.

The second table in this section illustrates the differences between the number of suppliers and the number of applications on the market.

We have 127 more applications than suppliers.

These multi-application suppliers are mainly identified in Belgium, Germany, Norway, Spain and the United Kingdom (England).

These multi-applications suppliers are the result of mergers between suppliers or some (international) suppliers buying or taking over national or local solution providers.

It is expected that most of these suppliers will evolve over time towards a restricted number of applications. This seems nevertheless not to be an easy process.

	Applications					
	GP	Hosp.	Home / Nursing	Paramed	Dental	Total

**Table 5 Number of applications in more than number of suppliers**

<sup>1</sup> Two suppliers were reported for the same product, one providing the "services" the other providing the basic technological support.

## **7.4 European Overview of the Cross Boarder / International Applications**

Cross border applications are defined as the same product (with the same name) used in more than one country.

This is mostly the case for some neighbouring countries (Belgium & Luxembourg, Czech Republic & Slovac Republic, Germany & Austria).

International applications are either the same products (with variants) or different applications provided and/or controlled by a "foreign" supplier.

This is more frequently the case for hospital information systems and/or (technical) departmental systems, controlled by either US based or European International Suppliers.

	Cross Border / International Applications					
	GP	Hospital	Home / Nursing	Para-medical	Dental	Total
Austria	4	6	0	0	2	12
Belgium	1	7	0	0	0	8
Bulgaria	0	0	0	0	0	0

**Table 6 Cross Border and "International" applications per country and per domain**

## **7.5 International / Cross Border Suppliers**

We identified a limited number of cross border and/or international suppliers.

We will not list the countries where they were reported as an important stakeholder. Most of them will probably be active in most of the European countries, member states and other countries.

Most of the "international" groups are operating in the hospital environment.

The list is not exhaustive. Some suppliers listed as important in one of the reported countries may be a small supplier in one or more other countries and therefore not being listed in the other countries.

### **7.5.1 In primary care**

The groups or suppliers listed in more than one country<sup>2</sup> are:

- Agfa Healthcare
- Alert Life Sciences Computing
- Cegedim
- CompuGROUP
- iSOFT
- Siemens

### **7.5.2 In secondary or hospital care**

The groups or suppliers listed in more than one country<sup>3</sup> are:

- 3M
- Agfa Healthcare
- Alert Life Sciences Computing
- Cerner
- CompuGROUP
- CSC Scandihealth
- G2 Speech
- GE Healthcare
- Hewlett Packard
- IBM
- IMS MAXIMS
- Intersystems
- iSOFT
- Mc Kesson
- Philips Healthcare / Medical Systems

---

<sup>2</sup> We could only identify parties operating under either a similar name in the different countries or referring to a group in their name or in an obvious way on their web site.

<sup>3</sup> Same remark.

- Picis
- SAP
- Siemens
- Stapro

For more details about these suppliers, see the next tables where they are listed.

## **7.6 Cross Domain Suppliers**

Most of the suppliers, most of the National suppliers are specialised in a specific user group or target market, but not all of them. We identified 89 different suppliers providing or supporting applications for more than one target market.

Horizontal integration within the same geographical area, the same country seems ongoing.

Cross Domain expertise is important to improve “interoperability” and quality of care by sharing information between the actors involved in the care for each individual patient.

Some “international suppliers” are not in this list. They are specialised in one or more applications addressing the same intended users in different countries.

Hereby a table with the suppliers of EHR systems for more than one domain or profession:

**Table 7 Suppliers present in more than one market**

For more details about these suppliers, see the next tables where they are listed.

## 8 Overview of the products and their suppliers per market segment

The overview is based on one entry, one row per product or per kind of service provided. The following information is provided if available:

1. Name of the Supplier. This is not always the original owner / developer of the product but the organisation / company responsible for the actual commercialisation and/or support of the product in a given country.

We are listing the hospital as such for in-house development of hospital information systems. Some partners indicated the name of a supplier instead of the hospital indicating that the internal development was based (originally) on a specific product.

2. Name of the Product, considering the addressed market segment. The same product may have a different name when used in primary care than when used in secondary or hospital care. This is more especially sometimes the case for applications used in primary care centres (polyclinics sometimes) and hospitals. The difference between both products is then based on a different configuration or set-up of the application.
3. Use: Country of Use: the country for which this application is marketed by that particular supplier.
4. Origin: Country of Origin: the country of origin is still most frequently the country of use of an application. Applications from abroad are rather exceptional, hospital environment excepted. It is not always easy to define that country of origin, even when known that we have an "imported" application. We are using the label "INT - international" in that case. The supplier may be originally a supplier from the country of use but meanwhile controlled by an external group or supplier: we use also "INT - international" in that case.
5. Address and City
6. Contact Person and Role of that person in the supplier organisation as available when producing the database
7. E-mail address, either the address of the contact person (when available) or the info address as provided on the documentation of the supplier/
8. Website

The name of the product is replaced by the "kind of service" for the listed service providers.

Some National EHR Market Overviews contain complementary information about some suppliers or products. This information is kept in the National EHR Market Overview and submitted and available in that overview, as submitted.

Market Share estimates are only indicative and available in some of the National EHR Market Overviews, as e.g. the Danish market overview.

Official document, documentation issued by an authority is mostly reliable regarding market share of the different products. This is not the case for market share estimates provided by industry, resulting in sometimes over 150 or even 200% markets.

## **8.1 Suppliers of GP Information Systems**

### **8.1.1 Introduction**

There is a large variation in how primary care is organised in the different countries: from individual General Practitioner practices over Group Practices to large Primary Care centres, linked or not to a local or a regional hospital.

Belgium is an example of a country with a large number of individual private practices or private group practices. Spain and some of the Newer Member States organised their care more in primary care centres, even with visiting specialists, nursing and paramedic care.

The more we have large primary care centres the less important the difference between GP Information Systems and the Hospital Information Systems, the first being then simply a different configuration of the same or a similar product.

We are in principle listing clinical information systems.

Countries as Germany have a very large installed base of Praxis Management or mainly Billing systems for use in primary care. Up to 190 different systems were certified in Germany, some of them with only one user. We limited our overview to the 60 systems managing clinical data in such a way that they were "certified" to manage breast cancer prevention, coronary disease patients management and also diabetic and/or COPD patients.

The applications were included in the overview based on information available about their market penetration and/or their status regarding certification or quality labelling.

Some countries were stricter in excluding applications with less than 5% market share.

Certified or quality labelled systems were included anyway based on an authentic source.

## 8.1.2 European Overview

Country	GP Systems		
	Vendors	Applic.	Intn'l
Austria	40	44	4
Belgium	17	21	1
Bulgaria	6	6	0
Croatia	7	7	0
Czech Republic	4	6	3
Denmark	17	17	2
Estonia	3	3	0
Germany	43	60	0
Greece	17	17	0
Hungary	3	3	0
Ireland	5	5	0
Italy	10	14	3
Luxembourg	6	6	0
Netherlands	6	10	1
Norway	3	8	0
Portugal	12	13	3
Romania	9	12	1
Serbia	3	3	0
Slovakia	11	11	0
Slovenia	5	5	0
Spain	8	10	4
United Kingdom	5	9	3
	10,91	13,18	1,14
	240	290	26

**Table 8 GP Information Systems and their Suppliers**

We have in total 290 different applications listed for 240 different suppliers. In average 1,208 applications per supplier. The rule is still one product per supplier, at least for primary care.

No primary care or GP systems were identified in Poland or in Cyprus. IT seems not to be in use in Cyprus, at least not for clinical purposes and not at a professional level. Primary care in Poland is more organised as local centres, as local "polyclinics" regrouping primary care and out-patient specialised care.

Only 25 or 8,96% of these applications are "cross border" application, which means that they are either a national version of an application also used in another country or that the local supplier is controlled by an entity or supplier from a different country.

### 8.1.3 National and Market Specificities

There is – at least for the reported countries – only one important international supplier in EHR systems for Primary Care, namely the CompuGroup from Koblenz, Germany.

Another important International Supplier, CEGEDIM from France, has also an International penetration in the market of the Primary Care systems, his home market being France.

Some suppliers are marketing several (competing) GP Information Systems.

This is mostly the result of mergers or taking over of some providers.

Most of these providers are in a process of migration to a more limited number of applications; at least they would like to do so.

This migration is mostly a painful process due to:

- resistance by the users: users do not want to choose and are happy with the choice they made sometimes years ago
- difficulties to recover previously recorded patient data into the new application

### 8.1.4 European List of Suppliers and their Applications

## **8.2 Suppliers of Commercially Available Hospital Information Systems**

### **8.2.1 Introduction**

The focus of this overview is on clinical EHR systems, EHR systems at hospital level. The overview is quite representative regarding these systems, more especially regarding the commercially available systems "on the market" and "in use" in one or more hospitals in the different countries.

The market is of course much bigger when taking in account all the different departmental and specialised (some times one topic or issue) applications.

Some departmental systems, more especially technical departmental systems were included in some national overviews. They are mostly related to imaging and/or lab information systems.

### **8.2.2 European Overview**

Country	Hospital Information Systems		
	Vendors	Applic.	Intn'l
Austria	20	22	6
Belgium	8	18	7
Bulgaria	3	3	0
Croatia	1	1	0
Cyprus	3	3	2
Czech Republic	8	7	1
Denmark	8	8	4
Estonia	5	5	0
Germany	10	15	5
Greece	25	25	0
Hungary	6	6	2
Ireland	8	8	6
Italy	38	42	11
Luxembourg	5	5	5
Netherlands	21	25	8
Norway	7	15	3
Poland	7	10	1
Portugal	11	13	2
Romania	6	7	1
Serbia	3	3	0
Slovakia	14	17	5
Slovenia	5	5	0
Spain	24	35	18
United Kingdom	16	22	15
	10,92	13,33	4,25
	262	320	102

**Table 9 Hospital Information Systems and their Suppliers**

We have in total 320 different applications listed for 262 different suppliers. In average 1,221 applications per supplier. These figures are very similar to the Primary Care market.

The rule is in general one commercialised product per supplier.

Reality might be slightly different because the market overview was focused on commercially available EHR systems in Hospital and less on the different departmental systems, frequently commercialised by the same suppliers as separate (plug-in) modules to the central hospital information systems.

102 or 31,88% of these applications are "cross border" or "international" applications. They are either a national version of an application used in another country or the national supplier is to be considered as a branch of foreign entity or controlled by an entity from a different country.

This means that the market for Hospital Information Systems seems to be "more open" OR that the number of suppliers able to provide such comprehensive systems are less numerous and acting on a more global scale.

The "internationalisation" of the Hospital Information Systems seems on the other hand more due to "technical" departmental systems (more especially imaging and lab information systems) than to clinical or EHR systems to be used in hospitals. The clinical systems are still largely "national" and based on local regulations and "traditional" ways to manage hospitals.

Some international or even global providers of "technical" departmental systems are not listed in some overviews, while obviously present in those countries. This is inherent to the actual review focusing on the use of EHR applications.

We have in average more than 4 "international applications" in use in the investigated countries. This is four times more than in the Primary Care Market.

### **8.2.3 National or Market Specificities**

The penetration of "International" applications is most important in the Anglo-Saxon countries (England, Ireland) with an important market share for non European suppliers and applications.

Other countries with a relatively important impact of "International" applications are Belgium, the Netherlands, Italy and most of all Spain.

The number of "International" applications is also relatively important in Germany, most probably focused on imaging solutions. The total number of different applications reported for Germany is on the other hand relatively low, including the main suppliers and applications only.

## 8.2.4 European List of Suppliers and their Applications

## **8.3 Suppliers of Home Care and Nursing Information Systems**

### **8.3.1 Introduction**

Hospital nursing systems are generally not considered as “independent” information systems but integrated, as an important and specific module into the hospital information systems. They are therefore not listed as such in this overview.

Homecare and more especially “nursing” systems or “nursing care related” systems, commercially available on the market are only reported for 16 countries.

This does not mean that such systems don’t exist in the other countries, but most probably as “in house” systems, not available on the market nor officially listed.

### **8.3.2 European Overview**

Country	Homecare/Nursing		
	Vendors	Applications	Internat.
<b>Belgium</b>	25	27	0
<b>Cyprus</b>	1	1	0
<b>Czech Republic</b>	3	3	1
<b>Denmark</b>	4	4	1
<b>Estonia</b>	1	1	0
<b>Greece</b>	4	4	0
<b>Hungary</b>	3	3	0
<b>Ireland</b>	1	1	0
<b>Italy</b>	5	5	0
<b>Luxembourg</b>	2	2	1
<b>Netherlands</b>	12	12	1
<b>Norway</b>	3	3	0
<b>Romania</b>	1	1	0
<b>Slovakia</b>	2	2	1
<b>Slovenia</b>	1	1	0
<b>Spain</b>	10	10	0
<b>United Kingdom</b>	9	11	3
	5,12	5,35	0,47
	87	91	8

**Table 10 Home Care Nursing applications and their Suppliers**

The project listed 91 different applications for 87 different suppliers in 17 countries.

Cross border and “International” applications are very exceptional in this relatively closed and small market.

### **8.3.3 National specificities**

Belgium accounts for one fourth of the reported applications, because all the “quality labelled” applications on the market were listed, as published by the Ministry of Health.

### 8.3.4 European List of Suppliers and their Applications

## 8.4 Suppliers of Paramedics Information Systems

### 8.4.1 Introduction

Most of the paramedical information systems are systems for physiotherapists (mainly) and for chiropractors (some).

Dietary, logopedics or “ambulance” software are also paramedical information systems. They are not part of this review.

### 8.4.2 European Overview

Country	Paramedics		
	Vendors	Applications	International
Austria	1	1	0
Belgium	19	24	0
Czech Republic	1	1	0
Denmark	16	22	6
Estonia	1	1	0
Greece	1	1	0
Ireland	3	3	0
Luxembourg	2	2	0
Netherlands	5	5	0
Norway	5	8	0
Slovakia	2	2	1
Slovenia	1	1	0
Spain	6	6	0
United Kingdom	10	10	4
	5,21	6,21	0,79
	73	87	11

**Table 11 Paramedical / Physiotherapy Information Systems and their Suppliers**

We listed 87 different systems provided by 73 suppliers in 14 reported countries. This means 1,192 systems per supplier.

Cross border and International systems are very exceptional in this market, Denmark and England excluded.

The “international” aspect of the Danish market is due to the presence of the CompuGroup on that market segment. All 6 “international” systems are supplied by the CompuGroup.

The “international” aspect of the English market is due to the presence of US or other English speaking countries on that market. This is the case for most of the domains studied in this overview.

### **8.4.3 National and Domain specificities**

The important number of applications reported for Belgium is due – as for the home care nursing – to a quality labelling process organised by the Ministry of Health. The listed applications is the list as published by that Ministry.

The Danish overview includes also applications for physical revalidation center management.

#### 8.4.4 European List of Suppliers and their Applications

## **8.5 Suppliers of Dental Information Systems**

### **8.5.1 Introduction**

The dental market for information systems looks a real niche market with a limited number of suppliers and applications in most of the reported countries, except for Denmark.

### **8.5.2 European Overview**

Country	Dental		
	Vendors	Applicati ons	Intern.
Austria	7	7	2
Belgium	4	4	0
Croatia	6	6	0
Cyprus	1	1	0
Czech Republic	1	1	1
Denmark	12	12	3
Greece	7	8	0
Hungary	3	3	0
Italy	1	1	1
Norway	1	1	1
Romania	3	3	0
Slovakia	4	4	2
Slovenia	1	1	0
Spain	4	4	0
United Kingdom	5	5	1
	4,00	4,07	0,73
	60	61	11

**Table 12 Dental Information Systems and their Suppliers**

The consortium listed in total 61 dental information systems for 15 different countries, or an average of 4 different systems per year.

Cross border applications are only in use in Norway and Slovakia. The other "international" systems are mainly supplied by entities controlled by the CompuGroup.

### 8.5.3 European List of Suppliers and their Applications

## **8.6 About "in house" development of Hospital Information Systems**

A limited number of "in house" developments of Hospital Information Systems were reported.

There are surely much more, may be even thousands of mainly "small" applications in use. Some are even "commercialised" to medical specialists and "integrated" or linked into the hospital information system. They are not listed here as they can't mostly be considered as EHR systems or even more as EHR systems at hospital level.

The "in house" developments reported in this section are "reference" developments in centres of excellence, some of them being university hospitals or large regional hospitals with their own IT staff.

26 such developments were reported.

These references as such.

## 9 Health IT Industry Associations

A partnership with the specialised Health IT industry as such is essential to reach any progress towards availability and even use of high quality EHR systems.

They play an important and sometimes essential role when

- Defining feasibility within a given timeframe of (new) functionality as requested by the users and/or the authorities
- Translating these functional requirements into unambiguous product requirements and testable criteria for quality labelling and certification
- Selecting development priorities based on those requirements and development capacities and of course in consensus with the users and the authorities.

Specialised industry can be contacted one by one. This is the hard and time consuming way to do.

Specialised industry organised themselves in some / in most of the countries into representative organisations where they meet. Authorities should make use of these opportunity.

We listed 44 such organisations. Some of them are very specific for the Health IT industry others are addressing IT more generally with one or specific departments or divisions related to eHealth and/or EHR systems. Some organisations are branches of International Organisations, mainly related to standards.

	Main Activities and Role	Role regarding EHR & Certification
Austria	ProRec-Austria (ProRec-AT)	
Fachverband der Elektro- und Elektronikindustrie (FEEI)	<p>"The Association of the Austrian Electrical and Electronics Industries (FEEI) represents the interests of around 300 industrial companies in Austria with 57,153 employees and a production value in 2009 of EUR 10.9 bn, which produce electric and electronic products or offer system solutions and services.</p> <p>As the nationwide body representing the interests of the electrical and electronics industry, the primary aim of FEEI is to play a major role in shaping the business and legal conditions for the industry as a whole in order to strengthen the position of these industrial companies in the global competition between locations.</p> <p>In terms of services, FEEI covers all areas of interest to companies in the industry such as labour market policy, economic policy, research and development, technology as well as environmental policy and education. The range of services comprises expert opinions on laws and regulations, as well as legal consultation, independent collective labour agreement negotiations, lobbying political and business decision-makers through to professional consultancy and project management. The Association's involvement extends far beyond national borders and it also operates at an international level. FEEI enters into cooperations and alliances and works closely with European associations representing employer and business interests."</p>	<p>FEEI together with UBIT may serve as primary contacts to the providers of health IT devices and systems. Together they provide harmonised process know how and technical expertise as input into certification schemes. They are also actively involved in standardisation initiatives within IHE Austria. Dissemination may also be a very valuable contribution.</p>
Fachverband Unternehmensberatung & IT – UBIT	<p>The most important activities of UBIT are targeted towards a sustainable legal framework , the representation of interests of its member companies in national and international organisations, communication among the public and the press, advancing education and learning. It is representing 46.171 companies, 72% of them are single person ventures, and 24% employ less than 10 persons.</p> <p>Many UBIT member companies provide consulting services, both to users and vendors of EHR systems. Dedicated and highly specialised services to resident doctors and to other smaller healthcare providers form an important part of UBIT member companies and a valuable contribution to Austrian healthcare.</p>	<p>UBIT together with FEEI may serve as primary contacts to the providers of health IT systems and devices. Together they provide harmonised process know how and technical expertise as input into certification schemes. They are also actively involved in standardisation initiatives within IHE Austria. Dissemination may also be a very valuable contribution.</p>
IHE-Austria	<p>The main goal of IHE Austria is to promote the use of IHE standards profiles for interoperability in the healthcare system in Austria. IHE Austria is also actively involved in the international activities of IHE. Austrian representatives play a leading role in the development of the ePharmacy integration profile. In a formal "memorandum of understanding" it is cooperating with other standards bodies represented in Austria: ON-K238, HL7, GS1, IHE, ProRecAT.</p>	<p>The standardisation bodies have been active in the recommendations of standards for interoperability in eHealth and for the electronic healthcare record ELGA in Austria from 2005 on. Both vendors and healthcare providers are represented, and there is an active communication network via the MoU between the standardisation groups. They may therefore play a valuable part in definition, and promotion of certification schemes in Austria, as well as in the international harmonisation.</p>
HL7 Anwendergruppe Österreich	<p>The HL7 User Group Austria is representing HL7 and is actively involved in international work. In a formal "memorandum of understanding" it is cooperating with other standards bodies represented in Austria: ON-K238, HL7, GS1, IHE, ProRecAT.</p>	<p>The standardisation bodies have been active in the recommendations of standards for interoperability in eHealth and for the electronic healthcare record ELGA in Austria from 2005 on. Both vendors and healthcare providers are represented, and there is an active communication network via the MoU between the standardisation groups. They may therefore play a valuable part in definition, and promotion of certification schemes in Austria, as well as in the international harmonisation.</p>

ProRec Austria	ProRec Austria is in correspondence with EuroRec, and promotes the use of EuroRec methods in Austria. In a formal "memorandum of understanding" it is cooperating with other standards bodies represented in Austria: ON-K238, HL7, GS1, IHE, ProRecAT.	The standardisation bodies have been active in the recommendations of standards for interoperability in eHealth and for the electronic healthcare record ELGA in Austria from 2005 on. Both vendors and healthcare providers are represented, and there is an active communication network via the MoU between the standardisation groups. They may therefore play a valuable part in definition, and promotion of certification schemes in Austria, as well as in the international harmonisation.
e-Health Initiative Österreich	e-Health Initiative was initiated by the Ministry of Health in 2005 as an expert body to provide harmonized and widely accepted recommendations for the implementation of eHealth in Austria. It represents stakeholders from all groups in the Austrian healthcare enterprise. They work on a wide range of topics in dedicated sub-groups. Its recommendations have been contributing to the construction of the Austrian national electronic healthcare record ELGA from 2005 on.	With its expertise and as a discussion and harmonisation platform the e-Health provides input to the decision making processes in Austria. It may therefore play a role for promoting and definition of certification processes in Austria.
<b>Main Activities and Role</b>		<b>Role regarding EHR &amp; Certification</b>
Belgium	ProRec-BE / EuroRec	
Agoria ICT e-Health Platform asbl-vzw	Agoria calls itself "The Federation for the Technology Industry". Agoria ICT e-Healthplatform members are mainly large (national and international) IT companies, also active in healthcare. Some of them are more hardware oriented, e.g. imaging and related software (Agfa, Philips, GE). Most of the providers listed also provide and/or are investing in hospital wide EHR applications, on top of specialised departmental systems. Some are closely related to hospital groupings.	Role EHR systems: The role of Agoria is mainly one of each member association, improving social contacts between stakeholders and transfer of information from authorities and other stakeholders to their members. Agoria is organising a yearly e-Health event and is representing their members in some official bodies, as e.g. the national eHealth Platform. Role regarding certification: No other role than being an information distribution channel. Might be more involved in future initiatives to quality label hospital based health IT products and applications.
ProRec-BE vzw / asbl	ProRec-BE, the Belgian branch of The EuroRec Institute, is a members association of suppliers and users of EHR systems with as main missions: 1) promote the use of high quality EHR systems 2) quality labelling and certification 3) represent the suppliers (and the related user organisations) in some official consultation bodies 4) promote interoperability of the EHR systems. The members are mainly the SME's, suppliers of EHR systems, but also user associations and some large health IT companies with a particular interest in the EHR.	Role EHR systems: The members of ProRec-BE represent over 90% of the market of EHR systems for General Practitioners. The most important providers of Hospital Information Systems (largely more than 50%) are also member. ProRec-BE is therefore the meeting place to discuss issues related to data exchange, semantic interoperability and quality labelling criteria. Role regarding certification: Representing the suppliers in agreeing and setting-up quality labelling for GP Information systems. This includes agreeing with the authorities, the suppliers and the users on what should be tested, how functional and quality criteria should be translated in test scenarios. This may include a role in the testing process as such. ProRec-BE is not certifying the products as such. That's the role of the authorities initiating the certification process. ProRec-BE will coordinate with EuroRec to grant the EuroRec Seal to applications certified by the Belgian authorities.

Croatia	HDMI - Hrvatskog drustva za medicinsku informatiku	
Hrvatsko društvo za medicinsku informatiku	<p>The Croatian Society for Medical Informatics (CSMI) is a non-profit organization concerned with the scientific field of medical informatics, which comprises the theory and practice of information science and technology within health care and health care science. CSMI was founded in 1989 and has now almost 100 members mostly professionals working in the field of medical informatics. Since 1992 CSMI has been a member of European Federation for Medical Informatics (EFMI) and International Medical Informatics Association (IMIA).</p> <p>The basic objectives of the CSMI are as follows: (1) to advance dissemination of information in the field of MI in Croatia, (2) to promote high standards in the application of work in this field, (3) to promote research and development in this field, (4) to encourage high standards in education in this field, (5) to advance international cooperation in this field. Since 1993 the CSMI has organized biannual professional and scientific meetings, often with international contributions.</p> <p>The CSMI initiated the establishment of the national Technical Committee 215 for standardization in medical informatics at the Croatian Institute for Standardization. It follows work of CEN TC251 and ISO TC215 and assists in the health care information system development in the Republic of Croatia. Members of CSMI also initiated founding of e-Health Committee of the Academy of Medical Sciences of Croatia.</p>	Together with other important topics from the domain of health informatics, EHRs is one of the key topics of CSMI activities. Being part of EHR-Q(tn) project, CSMI is putting much effort into raising awareness of importance of quality EHRs and establishing connections with health authorities regarding this issue.

Czech Republic	CNFeH - Ceske narodni forum pro eHealth, o.s	
ICT unie o.s.	It is an organisation gathering ICT vendors. It represents, negotiates in favour of their interests. The common goal is to enable the creation of appropriate condition for the existence and evolution of the information society	Vendors of HIS (health information systems) are part of consortium. They can be pushing ahead any idea (including certification) that eventually leads to better information society.
	Main Activities and Role	Role regarding EHR & Certification

Estonia	EES - Eesti E-tervise Sihtasutus	
Software Technology and Applications Developing Centre	<p>STACC is a joint initiative between Estonian leading IT companies and universities with the aim to create new software solutions in the field of Data Integration &amp; Mining and Software &amp; Services Engineering.</p> <p>STACC is one of eight competence centres financed by Enterprise Estonia. Centres aim to bridge the gap between scientific and economic innovation by providing a collective environment for academics, industry and other innovation actors and creating sufficient critical mass. Centres are involved in pooling of knowledge, creation of new knowledge by performing different types of research, training and dissemination of knowledge and networking.</p>	<p>STACC has projects that work on developing e-health applications. For instance, Data Integration and Mining project that has one of its focuses on the biomedical applications that rely on heterogeneous data sources from emerging e-health platforms for disease diagnosis, prevention, and cure. Therefore, its role regarding EHR systems is related to innovation, and improved efficiency of systems.</p>
ELIKO Competence Centre in Electronics-, Info- and Communication Technologies	<p>ELIKO's mission is to improve competitiveness of Estonian and European ICT industry through the deep integration of research and production institutions. ELIKO will enable reducing risks of development and validation of emerging ICT solutions for tomorrow. ELIKO team and its partners have 10+ years practical experiences in development of complex embedded hardware and software systems to be supported by academic advisors from Estonia, Finland, Germany, Italy, Japan, Sweden. The centre has an access to the top edge electronic measurement equipment and modern rapid prototyping tools.</p> <p>Eliko has an important role to play in enabling partners to maximize proficiency and shorten development time by applying best practices and new technological approaches. The usual outcome of ELIKO's activities is "proof of concept" simplifying further steps of participating companies for product development</p>	<p>No clear role defined regarding EHR systems and their certification. However, could have an effect on system development as they are working on innovative approaches. For instance, Eliko has a project Processing of broad band signals with applications in medical diagnosing, biotechnology, and context aware systems.</p>

P-Invent	EHR system specification/audit, central Health Care System (National Social Security) design/specification	developer of the Hungarian IT minimum requirements for EHR systems.
Magyar Telekom Plc.	medical support services, telemedicine, patient monitoring systems, electronic health records, remote healthcare, homecare, digital hospital	EHR system provider
	<b>Main Activities and Role</b>	<b>Role regarding EHR &amp; Certification</b>
Ireland	ProRec-IE	
Health Informatics Society of Ireland	This is essentially a members organisation rather than a "trade" one. HISI with Prorec Ireland did facilitate a significant report on the advantages of investment in ICT solutions, in the Irish context <a href="#">ICT's Role in Healthcare Transformation</a> . This was a new departure for HISI because the report was drafted entirely by the vendors, working in collaboration. The HISI council had very limited input into the process – as a considered stance.	

Prorec Ireland		This is an affiliate of the European Eurorec organization. Pro-Rec is taking the lead in promoting awareness of the benefits of certification of EHR systems. The Irish branch has contributed to raising awareness amongst the Irish Health informatics community. It has also contributed material to the Pro-Rec requirement repository.
	<b>Main Activities and Role</b>	<b>Role regarding EHR &amp; Certification</b>
Italy		ProRec-IT
Consortium Informatics for General Medicine	<p>CIMEG certifies EMR's GP, whose purpose is to define quality standards to ensure skilled management tool in studies of the GP.</p> <p>The Consortium brings together some of the major stakeholders:</p> <ul style="list-style-type: none"> <li>• Videopress S.r.l. (Perseo),</li> <li>• FIMED S.r.l. (Profim 2000),</li> <li>• RTP S.p.A. (Philos 2000),</li> <li>• COS S.r.l. (Koinè 2),</li> <li>• BRACCO,</li> <li>• MEDiatec (MEDICO 2000)</li> </ul> <p>and it currently serves about 20,000 users.</p>	The objective of CIMEG, in collaboration of FIMMG, is to define quality standards to ensure skilled management tool in studies of family physicians.
Consortium for interoperability and Medical Cooperation	<p>CICOM (Consortium for interoperability and Medical Cooperation) was created to give consistency and facilitate interaction between different modes of medical records (made by different manufacturers) used by General Practitioners / pediatrician and the various health institutions (regions, ASL, various institutions, etc.), medical associations and scientific societies.</p> <p>The products of five companies in fact are used by over 28,000 practitioners and 3,000 general pediatrician, covering, in fact, 80% of those using medical software professional.</p> <p>The five companies that make CICOM are:</p> <ul style="list-style-type: none"> <li>• BMSC, consortium of Bestsoft (with software Mira Pico) Koinè Servizi (with software Koinè) and TSF (with software latros)</li> <li>• Dedalus (with software Millewin)</li> <li>• Fimed (with software Profim2000 and Infantia)</li> <li>• Mediatec (with software Medico 2000)</li> <li>• Videopress (with software Perseo)</li> </ul>	CICOM is absolutely the first technology consortium - as representative by number of users - to effectively pursue the objective of ensuring the territorial medical support in its objectives to assist the citizens to health protection, ensuring a network of information systems and related services, through integration of land between medicine and hospital medicine.

ProRek Srbija – Industrijski forum	The founders of ProRec Serbia are key persons of Ministry of Health, Health institutions, Health Insurance Fund, Software Houses and Belgrade University. There are some successful IT projects in implementation in Serbia and founders of the ProRec Serbia are participating in them. All major players on the market, supporting more than 90% of the Serbian health care providers, have joined the Forum.	Building/supporting EHRs is one of the core businesses of the Industry Forum members. Most of the members are pro-actively involved in the development of legacy EHRs, as well as taking part in defining national specifications/standards in this domain.
	<b>Main Activities and Role</b>	<b>Role regarding EHR &amp; Certification</b>
Slovakia	ProRec centrum Slovensko	
ProRec centrum Slovensko	Civic foundation ProRec centrum Slovensko is an independent association, members of which are subjects with various specializations which showed their will and competence to contribute to electronization of health care. The Association has two main goals: 1. To contribute to improved protection and promotion of health by increased knowledge	Role EHR systems: ProRec centrum Slovensko has a goal to contribute to creation and improvement of EHR systems in Slovakia. It regularly organizes conferences and workshops either related especially to this topic or to eHealth projects in general with focus also to EHRs.

	<p>on health and diseases, and raising awareness on health among the population.</p> <p>2. To contribute to increased efficiency of health care by its electronization.</p> <p>In detail, it concentrates on</p> <ul style="list-style-type: none"> <li>- awareness of professionals on new theories, methods, pharmaceuticals, materials and equipment,</li> <li>- enhancement communication between medical doctors and professionals in other human sciences and sciences on human environment,</li> <li>- improvement of interaction between key players in medical informatics: between suppliers of software a their users as well as between providers of health services and their consumers (interaction doctor – patient),</li> <li>- electronization of health care, especially development of electronic health record in the Slovak Republic compatible with the common European Electronic Health Record,</li> <li>- semantic interoperability on regional, national, and international level with the aim to create integrated health care and medicine,</li> <li>- close cooperation with national foundations and associations.</li> </ul>	<p>Furthermore, EHR section of ProRec promotes implementation of international standards like SNOMED CT and EN13606.</p> <p><b>Role regarding certification:</b></p> <p>As a participant in EHR-Q<sup>TN</sup> project, ProRec centrum Slovensko presents the EuroRec certification system to national authorities and relevant IT companies. It tries to raise awareness about quality of IT systems in healthcare and hence the need for certification process for such products. There is an aim to make certification a part of Slovak eHealth programme and a precondition to interconnection of ambulatory or hospital information systems with National Health Information System.</p>
	<b>Main Activities and Role</b>	
Slovenia	Ustanova Prorec.SI	
Ustanova PROREC.SI	<p>Within the Ustanova Prorec.SI, Industrial Forum is a sub-branch whose members are software vendors in the domain of Health care in Slovenia. All major players on the market, supporting more than 90% of the Slovenian health care providers, have joined the Forum. Nearly 100% of the Slovenian population/patients are being treated by the health care providers that are using IT support from one of the Forum members.</p> <p>Forum has been recognised by the MoH of Slovenia as a single point of contact with SW vendors, where professional and medical informatics related issues can be discussed. The Forum has in also acted as a semi-formal consortia in negotiating business issues with a consortia of health care providers (buyers) on a nationwide IT implementation projects.</p>	<p>Building/supporting EHRs is one of the core businesses of the Industry Forum members. Most of the members are pro-actively involved in the development of legacy EHRs, as well as taking part in defining national specifications/standards in this domain.</p> <p>Rgd certification and quality labelling – Prorec.Si, as the Forum's parent organisation, has taken part in the projects Q-REC and EHR-Q(tn), led by EuroRec. Several activities have been performed in this direction together with the Forum members. The outcome was rather favourable, due to an overall positive attitude of the SW vendors.</p>
Slovensko društvo za medicinsko informatiko	<p>Slovensko društvo za medicinsko informatiko –SDMI (the Slovenian Medical Informatics Association – SIMIA) is a professional, non-governmental organization aimed to promote activities in the development of medical informatics in Slovenia as well as further in the countries of EU and to represent these activities in the country and abroad. SIMIA was founded already in 1986 and has now almost 100 members mostly professionals working in the field of medical informatics. The activities of SIMIA concern stimulation and co-ordination of the activities of its members in promoting medical informatics in the country and to support international co-operation in this field, which implies:</p> <ul style="list-style-type: none"> <li>• organization of scientific and professional conferences, symposia, courses and exhibitions and collaboration in such activities with related organizations;</li> <li>• publication of scientific, professional and educational documents and papers in the field of medical informatics;</li> <li>• dissemination of information about conferences, publications and links to websites web sites on medical and health informatics</li> <li>• promotion of scientific and professional contacts with similar societies at the international level;</li> <li>• active involvement to support scientists to attend international meetings;</li> <li>• publishing of scientific magazine Informatica Medica Slovenica (IMS).</li> </ul> <p>At a national level SIMIA keeps the tradition of yearly conferences often with international</p>	<p>SDMI / SIMIA is an influential professional society, traditionally with members from all relevant stakeholders in Slovenian Health IT. EHRs is one of the key topics of their concern, together with other important topics from the domain of health informatics.</p>

	participation. SIMIA has been a member of IMIA since 1993.	
	Main Activities and Role	Role regarding EHR & Certification
Spain	Hospital de Fuenlabrada & Instituto de Salud Carlos III	
Federación Española de Empresas de Tecnología Sanitaria	Fenin is a cross-federation, which includes enterprises and associations of manufacturers in the field of health technologies. However they have not a specific purpose in Information technologies.	They have not a role in certification.
Iniciativa Española de Software y Servicios	INES is the Spanish Technological Platform in the area of Systems and Software and Services. It is a network of scientific and technological cooperation composed of relevant technical agents in the area (businesses, universities, technology centres, etc.). However they have not a specific work group in e-health.	They have not a role in certification.
	Main Activities and Role	Role regarding EHR & Certification
England / UK	ProRec-UK	
Intellect	Intellect is the leading trade association for the technology sector which comprises the Information and Communications Technologies (ICT), Electronics Manufacturing and Design, and Consumer Electronics (CE) sectors, including defence and space-related IT. Intellect provides a collective voice for its members and drives connections with government and business to create a commercial environment in which they can thrive. Intellect represents over 750 companies ranging from SMEs to multinationals	<p>Intellect's Healthcare programme objectives relevant to EHR adoption and certification are</p> <ol style="list-style-type: none"> <li>1. Build influence with key government stakeholders across the UK.</li> <li>2. Improve the image of the healthcare technology industry, primarily by showcasing the benefits that technology-enabled services can deliver to patients, clinicians, and the business of the health services.</li> <li>3. Unblock the 'blockers', including those that stall the development of better health and social care solutions place unnecessary burdens/costs on suppliers and the health services prevent further SME involvement in the market</li> </ol>
British Computer Society	<p>BCS, The Chartered Institute for IT, promotes wider social and economic progress through the advancement of information technology science and practice. The BCS serve over 70,000 members including practitioners, businesses, academics and students, in the UK and internationally.</p> <p>About BCS - The Chartered Institute for IT:  The mission as BCS, The Chartered Institute for IT (formerly known as British Computer Society), is to enable the information society. It promotes wider social and economic progress through the advancement of information technology science and practice. The BCS bring together industry, academics, practitioners and government to share knowledge, promote new thinking, inform the design of new curricula, shape public policy and inform the public.</p> <p>The BCS vision is to be a world-class organisation for IT.</p> <p>They deliver a range of professional development tools for practitioners and employees. A leading IT qualification body, we offer a range of widely recognised qualifications</p>	<p>As the leading professional institute for IT professionals, BCS frequently responds to the government and media on various topical issues within the IT arena. The BCS organisation includes over 40 specialist groups including one devoted to Healthcare IT and is frequently called upon to provide 'informed opinion' on a variety of issues facing the use and deployment of IT in the NHS. In relation to the English NHS NPfIT the BCS issued the following: more information in the UK Market Overview</p>

## 10 Health IT Service Providers

### ***10.1 Introduction***

This lists include a variety of organisations providing related and sometimes essential services to the e-Health and Health IT community.

The template listed the following type of services offered as integrated or separate services or even as web services accessible from the EHR Systems:

- Agenda and/or Booking services
- Authentication services
- Back-up services
- Data-reference or Locator services
- Encryption services
- Health Telematic services, e.g. secured mail service for health care professionals
- Patient Summary Server services
- Prescription services (medication)
- Privacy and Security Consultancy
- Time Stamping services
- Trusted Third Party services
- Other services (please precise)

We are reporting this section as such.

Most of these services are only indirectly linked to the EHR applications and their use.

## 10.2 European Overview

Country	Service Providers		
	Vendors	Services	Intn'l
Austria	11	11	
Belgium	6	22	
Bulgaria	1	1	
Croatia	1	1	1
Cyprus	1	1	
Czech Republic	2	2	
Denmark	1	1	
Estonia	3	3	
Greece	7	11	
Ireland	1	1	
Luxembourg	1	1	
Netherlands	6	6	
Norway	1	2	
Poland	2	2	2
Serbia	1	1	
Slovakia	5	11	
Slovenia	2	2	
Spain	19	32	19
United Kingdom	11	11	3
	4,32	6,42	6,25
	82	122	25

The lists are quite different from country to country. Some partners limited themselves to "technical service providers" in the most restricted sense of the word; others also listed a huge number of entities providing e.g. consultancy services.

We tried not to be overwhelmed by these consultancy services, more especially when limited to "individual" experts offering services. They remain nevertheless in the National EHR Market Overview, as the National Deliverable D3.1B.

122 services and service providers are listed in this deliverable, from 19 different countries. They offer a large range of services listed above. Five countries did not provide such a list of service providers, important countries as Germany, Italy, Portugal, Romania and Hungary.

A more detailed investigation, less oriented to the service providers as such but focusing on the service, will surely be useful. This unfortunately largely exceeds the resources available to this project.

### 10.2.1 European List of Service Providers and their Services
